Assembling Layers PhotoShop is a \_layer-based\_ application that works on the layer system. The layers are organized by folders, and new images can be cut and pasted directly into a folder or dragged from any folder, to any layer, and even to a folder on a different drive. Adding new layers is simple. You can create a new layer in several ways. The main way is to select the Quick Selection tool, which is on the tools palette, as shown in Figure 5-3. You can also create a new layer by using the Layer New dialog box, as shown in Figure 5-4. You can also create a new layer from an image by pressing CTRL-J (that is, holding the CMD key on the Mac) when the image is selected. The new layer appears highlighted and is surrounded by green if you activate the "Use this layer for its own purpose" box, as shown in Figure 5-5. The layers are now named with the current filename. Layers can have a variety of settings, depending on the effect you want. Layers have \_states\_ and

Bale, 29, and Lampard, 33, are both free agents after playing for Real Madrid and Bayern Munich, respectively, this season. It is unclear at this time where they will play next season. Bale has been linked with an £80million move to Liverpool. "Real Madrid are working on a deal with the English club for Gareth Bale to join them in the summer," said Sky Sports, citing "industry sources" on Monday. The Liverpool Echo later added that it was "possible" the deal was close. The Bale transfer rumours were fuelled by reports that United had made it clear to Real that they would be willing to sell him for £50m as part of a deal which would also see Angel Di Maria go to Old Trafford. According to the report, United boss Louis van Gaal was "confident" of signing Bale but the Dutchman is now "more than happy" with the situation in place. The governor wasn't there to represent the people of Minnesota, but he had a few words. "A lot of issues are created by the governor," Carlson said. "And a lot of problems are created because they (Tampa Electric) are raking in money. So he will go wherever that money is." People like Carlson may lose their jobs. A lot of them do. Paula Frazier shook her head as she went into the office that's once again half-empty as construction whirls all around it. "Well, I can say things are getting worse," she said. "They had to bring in extra people, people we haven't seen in years." Before the deaths, before the arrest, Frazier went to Tampa Electric's line maintenance office in Fruitville. She had hoped she would get some information that would help figure out what happened and why. It didn't take long for Frazier to realize she was going to waste her time. "We were supposed to go straight to talking about it, but nothing was done. They said, 'We've heard you had questions, now we want to know what they are.'" So she listened. "I think they're too proud. They're not going to take a loss

Q: Using "git ls-files" to list files that are added and modified, but not deleted When listing files with "git ls-files", is it possible to list files that are both deleted and modified (like TortoiseGit does for Pending Changes window)? In particular, I want to generate a list of files that the user modified (i.e., added, deleted, or edited them), but not deleted those files. A: You can use filter to extract information you want: `git diff-tree --name-only -r -p HEAD | cut -f1 | xargs -n 1 git diff-tree --name-only -r -p \ | git diff-tree --diff-filter MERGE-MSG \ | cut -f1 | xargs -n 1 git log` Explanation: `git diff-tree --name-only -r -p HEAD` means get information about modified files. `cut -f1` means to get first line of file content. `xargs -n 1 git diff-tree --name-only -r -p \` means run only first command for each file. In case you have a large directory structure in which some of modified files are deleted, you should increase xargs parameter. `(cut -f1 | xargs -n 1 git diff-tree --name-only -r -p \)` means to run same command for all files in directory and on each of the file's lines output from `cut -f1` command is passed to next xargs command to a result that you will get in the last line of script. `git diff-tree --diff-filter MERGE-MSG \` means extract information from merge commit. `cut -f1` means to get first line of file content. `xargs -n 1 git log` means for each of the file's lines output from `cut -f1` command extract the log message and run corresponding command. A: Based on the OP's comment with the new question on git log it is possible to use git log with the output containing deleted lines. The easiest way of doing this is to use git log's --stat option `git log --stat # show file status like`
